☰ Projects

Wellness and Fitness Center	**Aug 2020 - Present (5 months)**

Company: FYP

Tools: Angular, Asp .Net, MySql, Bootstrap

A web application that develops a complete system for fitness and wellness industry combining the needs of clients, staff and management. This application will engage the clients to book the wellness and fitness services (like SPA, Gym trainer, Life coach, mental health care facility) from highly qualified staff at reasonable prices and simultaneously build great relationships. Clients will able to view staff roles/positions and working hours. There will be membership option for the clients and staff to get discounts in the services and there will be an attendance system where staff and clients will mark their attendance. Additionally, since the client and staff are legitimately authorized and registered in the application, so there will be a payment gateway for clients to pay their expenses. Clients can also suggest/request customized services related to wellness and fitness industry that will be approved by the management. Additionally, the service providers are under checking by the management for not charging any additional expenses.

Email System	**Nov 2018 - Feb 2019 (3 months)**

Company: Semester Project

Tools: Java, Java AWT library for GUI widgets

- Developed GUI based gmail like email system in Java and implemented and managed different classes like client,server,accounts etc.

Connect four game	

Company: Semester Project

Tools: C# Window Forms, Minimax Algorithm, GUI

- Developed a two player GUI based game.
- Used Minimax Algorithm of game theory.

Complete Crud functionality webpage for employees	

Company: N/A

Tools: Angular 7, Google Firebase, Bootstrap, Font Awesome

A complete ecosystem to Create, Remove, Update and Delete the data of employees.

Google Clone	

Company: Semester Project

Tools: Angular 9, Angular Material, Google custom search API

- Created a google like search engine using custom search API (Single page application).
- One can search anything from search bar and app will navigate to results page showing results.

Netflix Clone

Company: N/A

Tools: Angular 10, Angular Material, Movies DB API

- Netflix clone is created using angular and movies database (tmdb) API.

Travel company registration

Tools: Php, Mysql, Bootstrap, html, css

- Created a website for user registration in a travel company.
- User will ask to add Name, Email, Ph# and other pickup details.
- These details are stored in the company database.
